**Heat-stabilized polyamide 12 molding compound with improved demoldability**

**VESTAMID® LX9043 NC** is a semi-crystalline, low-viscosity molding compound based on PA12, from which various hollow articles can be produced by rotational molding. The polyamide 12 molding compound is especially suitable for industrial and technical applications with requirements for the manufacture of plastic products of different sizes. The semi-crystalline molding compound absorbs only small amounts of water. Components made from it therefore exhibit excellent dimensional stability under varying ambient humidity.

VESTAMID® LX9043 NC is supplied as cylindrical granules, ready for processing, in moisture-proof bags.

In the undamaged original packaging, the product has a shelf life of at least 2 years if stored in dry rooms at temperatures not exceeding 30°C.

The use of colorants may affect property values.

The results shown have been generated from a low number of production lots. Therefore, they are preliminary and not yet the result of a statistical evaluation. Therefore they must not be used to establish specifications.

For information about processing of VESTAMID®, please follow the general commendations about "[Processing of VESTAMID® compounds](#)".

The values presented are typical or average values, they do not constitute a specification.
