CELCON® UV140LG

POM — Celanese

Processing/Physical Characteristics	Value	Unit	Test Standard
ISO Data			
[C] Melt volume-flow rate, MVR	**13**	cm³/10min	ISO 1133
Temperature	**190**	°C	-
Load	**2.16**	kg	-
[C] Molding shrinkage, parallel	**1.6**	%	ISO 294-4, 2577
[C] Molding shrinkage, normal	**1.5**	%	ISO 294-4, 2577

[C]: CAMPUS

Mechanical properties	Value	Unit	Test Standard
ISO Data			
[C] Tensile Modulus	**1950**	MPa	ISO 527
[C] Yield stress	**41**	MPa	ISO 527
[C] Yield strain	**10**	%	ISO 527
[C] Nominal strain at break	**11**	%	ISO 527
[C] Charpy notched impact strength, +23°C	**3.1**	kJ/m²	ISO 179/1eA

[C]: CAMPUS

Thermal properties	Value	Unit	Test Standard
ISO Data			
[C] Melting temperature, 10°C/min	**165**	°C	ISO 11357-1/-3
[C] Temp. of deflection under load, 1.80 MPa	**80**	°C	ISO 75-1/-2
[C] Temp. of deflection under load, 0.45 MPa	**138**	°C	ISO 75-1/-2
[C] Coeff. of linear therm. expansion, parallel	**130**	E-6/K	ISO 11359-1/-2
[C] Coeff. of linear therm. expansion, normal	**130**	E-6/K	ISO 11359-1/-2

[C]: CAMPUS

Other properties	Value	Unit	Test Standard
[C] Density	**1330**	kg/m³	ISO 1183

[C]: CAMPUS

Processing Recommendation Injection Molding	Value	Unit	Test Standard
Pre-drying - Temperature	**80**	°C	-
Pre-drying - Time	**3**	h	-
Processing humidity	**≤0.35**	%	-
Melt temperature	**180 - 195**	°C	-
Mold temperature	**80 - 105**	°C	-

Characteristics

Processing
Injection Molding

Features
Copolymer

Delivery form
Pellets

Regional Availability
North America, Asia Pacific, South and Central America

Special Characteristics
U.V. stabilized or stable to weather

Other text information

Injection molding

Drying is recommended for low gloss grades of Celcon® and Hostaform® acetal copolymers. Excessive moisture can lead to splay (silver streaking) in molded parts. For better uniformity in molding especially when using regrind or material that has been stored in containers open to the atmosphere, recommended drying conditions are 80 C (180 F) for 3hours. Desiccant hopper dryers are not required. Maximum water content = 0.35%

Standard reciprocating screw injection molding machines with a high compression screw (minimum 3:1 and preferably 4:1) and low

back pressure (0.35 Mpa/50 PSI) are favored. Using a low compression screw (I.E. general purpose 2:1 compression ratio) can result in unmelted particles and poor melt homogeneity. Using a high back pressure to make up for a low compression ratio may lead to excessive shear heating and deterioration of the material.

Use a slow injection speed until material passes through the gate.

Melt Temperature: Preferred range 180-195 C (~356-~383 F). Melt temperature should never exceed 230 C (450 F).

Mold Surface Temperature: Preferred range 80-105 C especially with wall thickness less than 1.5 mm (0.060 in.). May require mold temperature as high as 120 C (250 F) to reproduce mold surface or to assure minimal molded in stress. In general, mold surface temperatures lower than 82 C (180 F) may produce a hazy surface or a surface with flow lines, pits and other included defects. Postprocessing conditioning and moisturizing are not required. It may be necessary to fixture large or complicated parts with varying wall thickness to prevent warpage while cooling to ambient temperature.
